

zSoftwareSP Announces a Resellers Agreement with Software Diversified Services

Ashburn, VA--June 15, 2017-- Software Diversified Services (SDS), acquired the SMA_RT software product from Type80 Security Software, Inc. and it has been reintroduced as VitalSigns SIEM Agent™ for z/OS (VSA). VSA is a real-time mainframe intrusion detection, SIEM agent, and log event processing product for z/OS.

SMA_RT, now VSA, has been deployed across four continents with commercial customers in industries such as finance, banking, payment card processing, automobile importing, retail sales, international hotel/travel, corporate management, health care, insurance, education, telecommunications, and home security.

VSA is a renowned, patented z/OS security offering that was the first SIEM agent for IBM z/OS. It is a revolutionary product that provides the ability to view cross-platform security event log data in real time. It provides IT security departments a true enterprise-wide view of security activity, threats, and intrusions.

VSA delivers security event messages from z/OS – RACF, CA-ACF2, CA-Top Secret, DB2, CICS, FTP, and TCP/IP – to distributed security information and event management (SIEM) systems. It seamlessly brings the distributed and mainframe worlds together.

VSA has certified integrations with IBM QRadar and HP ArcSight, as well as field integrations with other leading SIEM solutions, including Splunk. VSA installs quickly, uses minimal resources, and does not require extensive training, ongoing maintenance, or administration.

zSoftwareSP's ownership has over 17 years of experience in the original design of VSA, sales to customers around the globe, and is now an authorized VSA reseller in North America.
